**Q 1.2 Pooling Layer** 

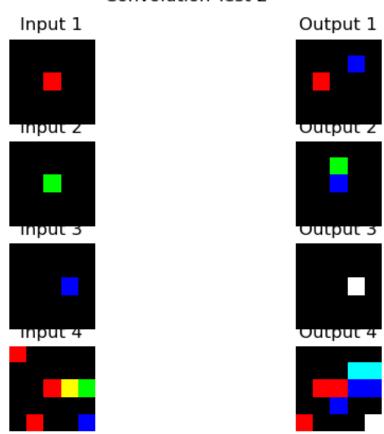

# Pooling Test Input 1 Output 1 Input 2 Output 2

Q 1.3 Convolution Layer

# Convolution Test 1

### Convolution Test 2

# Q 1.4 ReLU

### **Problem I meet:**

When I am running train\_lenet to train my network there will report a warning:

"RuntimeWarning: divide by zero encountered in log nll = -np.sum(np.log(P[I == 1]))"

### **Solution:**

I think there is sth wrong caused by copying pointer in relu forward. I don't know how to fix it so i just implemented it in another way. Then the network worked and accuracy reached 95. I have tried np.maximum() function. It works for me. (My original method is out = in; out[out<0]=0 which returns error)

# Q 2.1 ReLU

## **Problem I meet:**

**Solution:** 

# Q 2.2 Inner Product layer

### **Problem I meet:**

**Solution:**
